

Why ^{not} have a PSA test?

There's a lot of talk about whether or not Prostate-Specific Antigen (PSA) tests are useful in diagnosing prostate cancer. Why not get the facts and make up your own mind? Swedish/Edmonds presents a physician-led discussion on the value and controversies related to PSA testing. Before the presentation you can have a private, five-minute consultation with a Swedish urologist to ask your own questions. And you also have the option of getting a free PSA blood test if you pre-register. Please join us:
